

Full-range Vacuum Gauge

Full Range Vacuum Gauge with control unit

A full range vacuum gauge that can measure pressure continuously from 1023 mbar to $10E-9$ mbar has been developed. The gauge consists of two miniature gauges in a single CF35 flange. The electronic control unit switches between the two gauges at the appropriate pressure. This technology has been transferred to private companies for commercial production.

- Technology has been transferred to pvt industry.
